

## Working with Logframes

Build your confidence to design and use logical frameworks

**This programme introduces the core technique used by most development organisations to plan, track and evaluate individual projects. You will leave the course with a thorough understanding of how to design and adapt logical frameworks.**

### Why choose this course

This is a new course to help project staff and non-M&E specialists increase their skills in using the logical framework and understand its strengths and weaknesses compared to other approaches.

For a more comprehensive grounding in the underlying principles and practical tools, M&E specialists also choose our popular 10-day Monitoring and Evaluation course ([download the Monitoring and Evaluation course factsheet](#)).

### What you will learn

Through short presentations and interactive exercises based on your own work, you will be guided through the steps to design and use a logical framework.

You will learn how to:

- Design projects that address the most pressing problems of the individuals and communities you work with.
- Link activities to outputs, purposes and goals.
- Create a strong foundation for an effective M&E system.
- Develop confidence and ownership of your M&E system among those who deliver it.

**How long:** Three days

**Cost:** £750

### When and where:

July 4-6, 2012,  
Brighton, UK  
Application deadline: May 23

### Three-day course overview

#### Day 1

##### Overview and first steps

- Understanding the tools for building a logical framework.
- Developing a problem tree.
- Formulating statements of objectives and linking them in result chains.

#### Day 2

##### Objectives and indicators

- Identifying the environmental conditions necessary to progress from low to high level objectives.
- Assessing different types of indicator.
- Developing pro-poor and gender-sensitive indicators.
- Identifying the main types of monitoring activity and fitting them to indicators.

#### Day 3

##### Strengths, weaknesses, design alternatives and wider options

- Evaluating existing logical frameworks using quality criteria.
- Analysing the overall strengths and weaknesses of the logical framework approach.
- Understanding how leading development agencies adapt and customise logical frameworks.
- Exploring alternatives to the logical framework.

This new course was developed in response to requests from M&E specialists who had attended our Monitoring and Evaluation course. This is what some of those M&E specialists have to say about our training:

“A well-organised and quality training course with great content combining knowledge with practice and fun. IMA training creates agents for positive change.”

Esinu Abbey, IT Co-ordinator,  
Community Water and Sanitation  
Agency, Ghana

“This course has broadened my perspective and helped to logically organise my previous knowledge. I definitely look forward to future training courses with IMA.”

Juliana Abude,  
Programme Coordinator, Partnership  
for Transforming Health Systems 2,  
Nigeria
